

FLU EXPRESS

Flu Express is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection. It monitors and summarizes the latest local and global influenza activities.

Local Situation of Influenza Activity (as of Dec 19, 2012)

Reporting period: Dec 9 – Dec 15, 2012 (Week 50)

- The latest surveillance data showed that the influenza activity was at baseline level.
- Influenza can cause serious illnesses in high-risk individuals and even healthy persons. Except for those with contraindications, influenza vaccination is suitable for all members of the public.
- Children between the age of six months and less than 6 years old as well as elderly people aged 65 years and above are eligible to receive subsidised vaccination from enrolled private doctors participating in the Government's vaccination subsidy schemes starting from Sep 24, 2012.

Influenza-like-illness surveillance among sentinel general outpatient clinics, 2010-12

In week 50, the average consultation rate for influenza-like illness (ILI) among sentinel general outpatient clinics (GOPCs) was 3.7 ILI cases per 1,000 consultations (figure 1).

Figure 1 ILI consultation rate at sentinel GOPC, 2010-12

Influenza-like illness surveillance among sentinel private doctors, 2010-12

In week 50, the average consultation rate for ILI among sentinel private doctors was 38.6 ILI cases per 1,000 consultations (figure 2).

Figure 2 ILI consultation rate at sentinel GP, 2010-12

Influenza virus detections (Laboratory surveillance), 2011-12

In week 50, the number of influenza viruses detected in the Public Health Laboratory Centre was 40, including 32 influenza A (H3) viruses, 5 influenza A (H1N1)2009 viruses and 3 influenza B viruses (figure 3).

Figure 3 Influenza virus detections, 2011-12

Influenza-like illness outbreak monitoring, 2011-12

In week 50, 6 ILI outbreaks occurring in schools/institutions were recorded (figure 4). In the first 4 days of week 51 (Dec 16 to 19, 2012), 2 ILI outbreaks occurring in a schools/ institutions were recorded.

Figure 4 ILI outbreaks, 2011-12

Rate of influenza-like illness syndrome group in accident and emergency departments, 2010-12[#]

In week 50, the rate of the influenza-like illness syndrome group in the accident and emergency departments (AED) was 167.2 (per 1,000 coded cases) (figure 5).

[#]Note: The influenza-like illness syndrome group includes codes such as influenza, upper respiratory tract infection, fever, cough, throat pain, and pneumonia.

Figure 5 Rate of ILI syndrome group in AED, 2010-12

Influenza associated hospital admission rates and deaths based on discharge coding, 2010-12

In week 50, hospital admission rates with principal diagnosis of influenza for persons aged 0-4 years, 5-64 years and 65 years or above were 0.11, 0.01 and 0.04 cases respectively (per 10,000 people in the age group) (figure 6). Weekly number of deaths with any diagnosis of influenza in public hospitals is also shown in the figure on the right hand side.

Figure 6 Influenza associated hospital admission rates and deaths, 2010-12

Fever surveillance at sentinel child care centres/ kindergartens, 2010-12

In week 50, 0.67% of children in the sentinel child care centres / kindergartens (CCC/ KG) had fever (figure 7).

Figure 7 Percentage of children with fever at sentinel CCC/ KG, 2010-12

Fever surveillance at sentinel residential care homes for the elderly, 2010-12

In week 50, 0.1% of residents in the sentinel residential care homes for the elderly (RCHEs) had fever (figure 8).

Figure 8 Percentage of residents with fever at sentinel RCHE, 2010-12

Influenza-like illness surveillance among sentinel Chinese medicine practitioners, 2010-12

In week 50, the average consultation rate for ILI among Chinese medicine practitioners (CMPs) was 1.19 ILI cases per 1,000 consultations (figure 9).

Figure 9 ILI consultation rate at sentinel CMP, 2010-12

Surveillance of severe paediatric influenza-associated complication/death (Aged above one month and below 18 years)

- In week 50 and the first 4 days of week 51 (Dec 16 to 19, 2012), there were no new reports of severe paediatric influenza-associated complication/death.

Note: The data reported are provisional figures and subject to further revision.

Surveillance of Tamiflu resistant influenza A(H1N1)2009 virus infection

- In week 50 and the first 4 days of week 51 (Dec 16 to 19, 2012), there were no new reports of oseltamivir (Tamiflu) resistant influenza A(H1N1)2009 virus infection. There are totally 22 reports of Tamiflu resistant influenza A(H1N1)2009 virus detected in Hong Kong since 2009.

Global Situation of Influenza Activity

- In the United States (week ending Dec 8, 2012), the influenza activity increased.
- In Canada (week ending Dec 8, 2012), the influenza activity continued to increase.
- In the United Kingdom (week ending Dec 9, 2012), the ILI consultation rate remained low.
- In Europe (week ending Dec 9, 2012), the influenza activity remained at a low level.
- In Singapore (week ending Dec 15, 2012), the number of consultations for acute respiratory infections remained below the warning level.
