

FLU EXPRESS

Flu Express is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection. It monitors and summarizes the latest local and global influenza activities.

Local Situation of Influenza Activity (as of Aug 14, 2013)

Reporting period: Aug 4 – 10, 2013 (Week 32)

- The latest surveillance data showed that the local influenza activity remained stable.
- The Centre for Health Protection has collaborated with the Hospital Authority and private hospitals to monitor influenza associated intensive care unit (ICU) admissions or deaths (aged 18 years or above) since Jul 26, 2013. As of Aug 14, there were 12 cases of influenza associated ICU admission or death, in which 7 of them were fatal.
- Influenza can cause serious illnesses in high-risk individuals and even healthy persons. Except for those with contraindications, influenza vaccination is suitable for all members of the public.

Influenza-like-illness surveillance among sentinel general outpatient clinics, 2011-13

In week 32, the average consultation rate for influenza-like illness (ILI) among sentinel general outpatient clinics (GOPCs) was 4.0 ILI cases per 1,000 consultations (Figure 1).

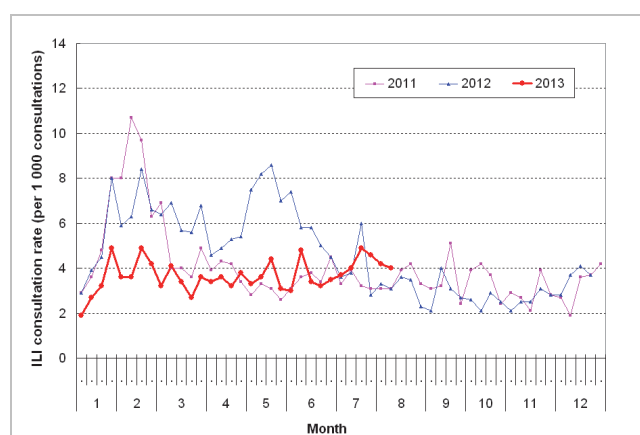

Figure 1 ILI consultation rate at sentinel GOPC, 2011-13

Influenza-like illness surveillance among sentinel private doctors, 2011-13

In week 32, the average consultation rate for ILI among sentinel private doctors was 37.7 ILI cases per 1,000 consultations (Figure 2).

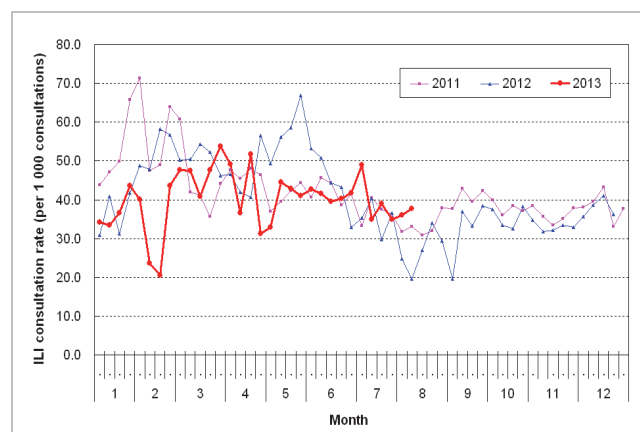

Figure 2 ILI consultation rate at sentinel GP, 2011-13

Influenza virus detections (Laboratory surveillance), 2012-13

In week 32, the number of influenza viruses detected in the Public Health Laboratory Centre was 172, including 138 influenza A (H3) viruses, 29 influenza A (H1N1)2009 viruses and 5 influenza B viruses (Figure 3).

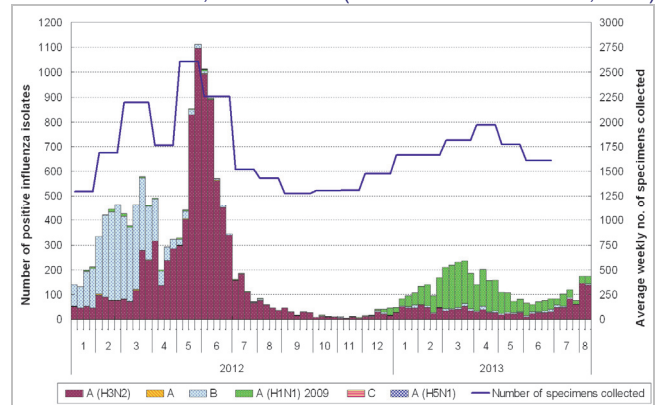

Figure 3 Influenza virus detections, 2012-13

Influenza-like illness outbreak monitoring, 2012-13

In week 32, 6 ILI outbreaks occurring in schools/institutions were recorded. In the first 4 days of week 33 (Aug 11 to 14, 2013), 3 ILI outbreaks occurring in schools/ institutions were recorded (Figure 4).

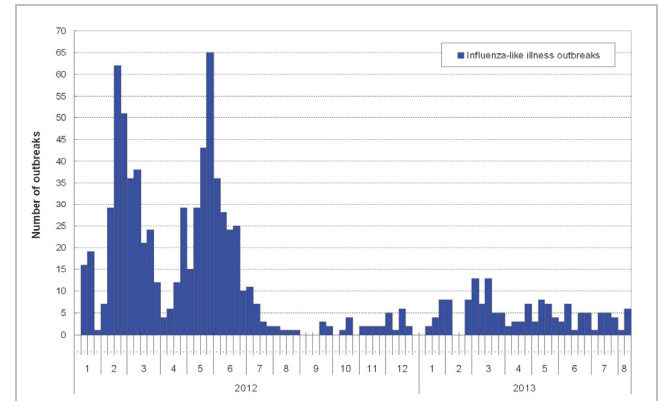

Figure 4 ILI outbreaks, 2012-13

Rate of influenza-like illness syndrome group in accident and emergency departments, 2011-13[#]

In week 32, the rate of the influenza-like illness syndrome group in the accident and emergency departments (AED) was 141.5 (per 1,000 coded cases) (Figure 5).

[#]Note: The influenza-like illness syndrome group includes codes such as influenza, upper respiratory tract infection, fever, cough, throat pain, and pneumonia.

Figure 5 Rate of ILI syndrome group in AED, 2011-13

Influenza associated hospital admission rates and deaths based on discharge coding, 2011-13

In week 32, hospital admission rates with principal diagnosis of influenza for persons aged 0-4 years, 5-64 years and 65 years or above were 0.73, 0.04 and 0.43 cases respectively (per 10,000 people in the age group) (Figure 6). Weekly number of deaths with any diagnosis of influenza in public hospitals is also shown in the figure on the right hand side.

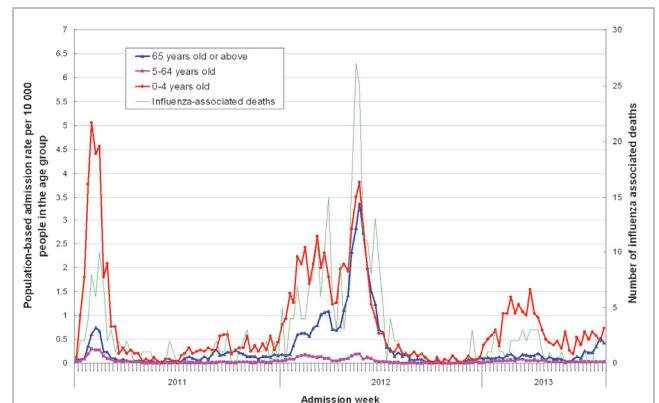

Figure 6 Influenza associated hospital admission rates and deaths, 2011-13

Fever surveillance at sentinel child care centres/ kindergartens, 2011-13

In week 32, 0.81% of children in the sentinel child care centres / kindergartens (CCC/ KG) had fever (Figure 7).

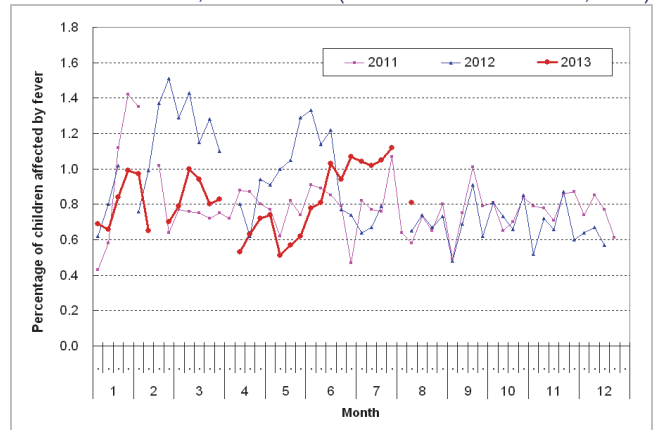

Figure 7 Percentage of children with fever at sentinel CCC/ KG, 2011-13

Fever surveillance at sentinel residential care homes for the elderly, 2011-13

In week 32, 0.10% of residents in the sentinel residential care homes for the elderly (RCHEs) had fever (Figure 8).

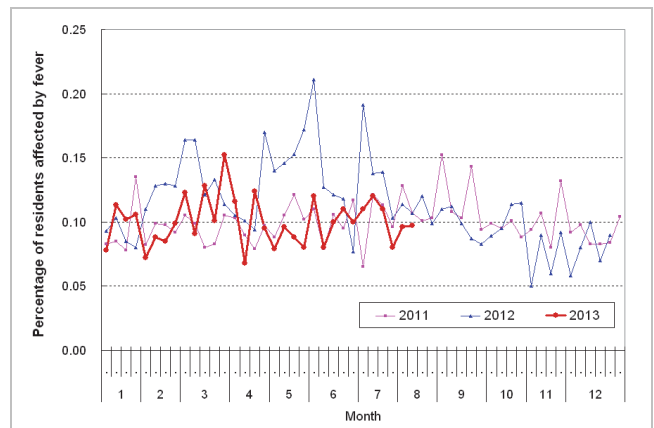

Figure 8 Percentage of residents with fever at sentinel RCHE, 2011-13

Influenza-like illness surveillance among sentinel Chinese medicine practitioners, 2011-13

In week 32, the average consultation rate for ILI among Chinese medicine practitioners (CMPs) was 2.25 ILI cases per 1,000 consultations (Figure 9).

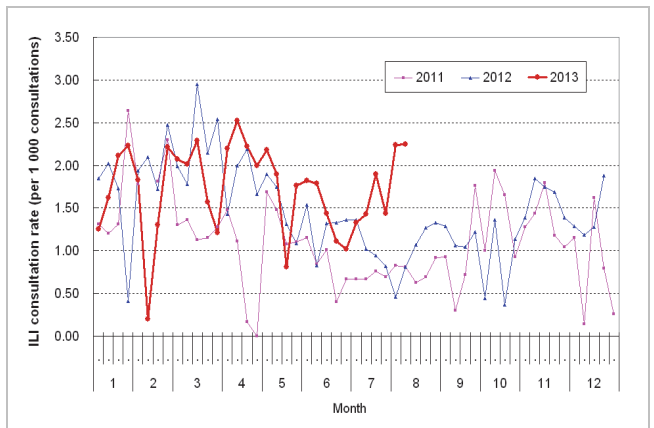

Figure 9 ILI consultation rate at sentinel CMP, 2011-13

Enhanced Surveillance for Severe Seasonal Influenza (Aged 18 years or above)

- From Aug 7, 2013, 12:00 noon to Aug 14, 2013, 12:00 noon, 7 cases of influenza associated ICU admission were recorded, in which 5 of them were fatal. In addition, one previously reported case who required ICU admission passed away during this reporting period.

Note: The data reported are provisional figures and subject to further revision.

Surveillance of severe paediatric influenza-associated complication/death (Aged above one month and below 18 years)

- In week 32 and the first 4 days of week 33 (Aug 11 to 14, 2013), there were no new reports of severe paediatric influenza-associated complication/death. Separately, for the suspected case of severe paediatric influenza-associated death involving a 1-year-old boy reported in week 30, further laboratory test results yielded negative results for influenza virus.

Note: The data reported are provisional figures and subject to further revision.

Surveillance of Tamiflu resistant influenza A(H1N1)2009 virus infection

- In week 32 and the first 4 days of week 33 (Aug 11 to 14, 2013), there were no new reports of oseltamivir (Tamiflu) resistant influenza A(H1N1)2009 virus infection. There are totally 33 reports of Tamiflu resistant influenza A(H1N1)2009 virus detected in Hong Kong since 2009.

Global Situation of Influenza Activity

- In the United States (week ending Aug 3, 2013), the influenza activity remained low.
- In the United Kingdom (week ending Aug 4, 2013), the ILI consultation rate remained low.
- In New Zealand (week ending Aug 11, 2013), the ILI consultation rate was below the baseline.
- In Singapore (week ending Aug 10, 2013), the number of consultations for acute respiratory infections was below the warning level.
