

FLU EXPRESS

Flu Express is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection. It monitors and summarizes the latest local and global influenza activities.

Local Situation of Influenza Activity (as of Jun 11, 2014)

Reporting period: Jun 1 – 7, 2014 (Week 23)

- The overall influenza activity has increased as compared with the past few weeks.
- Influenza can cause serious illnesses in high-risk individuals and even healthy persons. Except for those with contraindications, influenza vaccination is suitable for all members of the public.
- Children (aged between six months and less than 6 years, or attending a kindergarten or child care centre in Hong Kong) and elderly (aged 65 years or above), who are eligible, can be subsidised for seasonal influenza vaccination from enrolled private doctors participating in the Government's vaccination subsidy schemes starting from Oct 2, 2013.

Influenza-like-illness surveillance among sentinel general outpatient clinics, 2012-14

In week 23, the average consultation rate for influenza-like illness (ILI) among sentinel general outpatient clinics (GOPCs) was 5.0 ILI cases per 1,000 consultations (Figure 1).

Figure 1 ILI consultation rate at sentinel GOPC, 2012-14

Influenza-like illness surveillance among sentinel private doctors, 2012-14

In week 23, the average consultation rate for ILI among sentinel private doctors was 56.5 ILI cases per 1,000 consultations (Figure 2).

Figure 2 ILI consultation rate at sentinel GP, 2012-14

Influenza virus detections (Laboratory surveillance), 2013-14

For the respiratory specimens received in week 23, 214 (10.0%) were tested positive for seasonal influenza viruses, including 12 influenza A(H1N1)pdm09 viruses, 118 influenza A(H3) viruses, 80 influenza B viruses, and 4 influenza C viruses (Figure 3).

Figure 3 Influenza virus detections, 2013-14

Percentage positive for influenza viruses, 2013-14

Among the respiratory specimens received in week 23, 0.6% was influenza A(H1N1)pdm09, 5.5% influenza A(H3), 3.7% influenza B, and 0.2% influenza C (Figure 4).

Figure 4 Percentage positive for influenza viruses, 2013-14

Influenza-like illness outbreak monitoring, 2013-14

In week 23, 3 ILI outbreaks occurring in schools/institutions were recorded. In the first 4 days of week 24 (Jun 8 to 11, 2014), 4 ILI outbreaks occurring in schools/institutions were recorded (Figure 5).

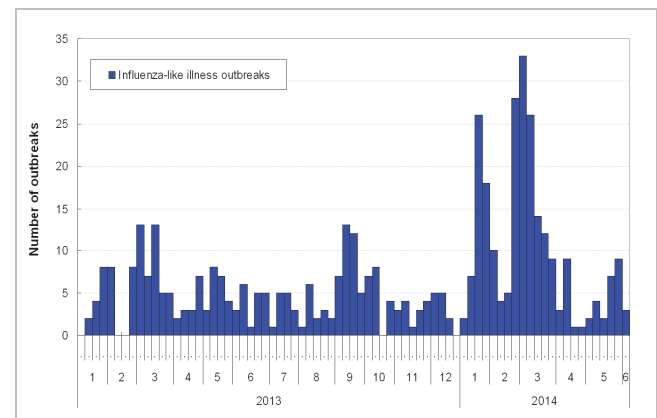

Figure 5 ILI outbreaks, 2013-14

Rate of influenza-like illness syndrome group in accident and emergency departments, 2012-14[#]

In week 23, the rate of the influenza-like illness syndrome group in the accident and emergency departments (AED) was 167.5 (per 1,000 coded cases) (Figure 6).

[#]Note: The influenza-like illness syndrome group includes codes such as influenza, upper respiratory tract infection, fever, cough, throat pain, and pneumonia.

Figure 6 Rate of ILI syndrome group in AED, 2012-14

Influenza associated hospital admission rates and deaths based on discharge coding, 2012-14

In week 23, hospital admission rates with principal diagnosis of influenza for persons aged 0-4 years, 5-64 years and 65 years or above were 0.85, 0.04, and 0.45 cases respectively (per 10,000 people in the age group) (Figure 7). Weekly number of deaths with any diagnosis of influenza in public hospitals is also shown in the figure on the right hand side.

Figure 7 Influenza associated hospital admission rates and deaths, 2012-14

Fever surveillance at sentinel child care centres/ kindergartens, 2012-14

In week 23, 0.78% of children in the sentinel child care centres/ kindergartens (CCC/ KG) had fever (Figure 8).

Figure 8 Percentage of children with fever at sentinel CCC/ KG, 2012-14

Fever surveillance at sentinel residential care homes for the elderly, 2012-14

In week 23, 0.11% of residents in the sentinel residential care homes for the elderly (RCHEs) had fever (Figure 9).

Figure 9 Percentage of residents with fever at sentinel RCHE, 2012-14

Influenza-like illness surveillance among sentinel Chinese medicine practitioners, 2012-14

In week 23, the average consultation rate for ILI among Chinese medicine practitioners (CMPs) was 2.07 ILI cases per 1,000 consultations (Figure 10).

Figure 10 ILI consultation rate at sentinel CMP, 2012-14

Surveillance of severe paediatric influenza-associated complication/death (Aged above one month and below 18 years)

- In week 23, one case of severe paediatric influenza-associated complication was reported, involving a 13-month-old girl who had developed encephalitis. She is currently in critical condition. Her respiratory specimen was tested positive for influenza A(H3) virus. In the first 4 days of week 24 (Jun 8 to 11, 2014), there were no new cases of severe paediatric influenza-associated complication/death.

Note: The data reported are provisional figures and subject to further revision.

Surveillance of oseltamivir resistant influenza A(H1N1)pdm09 virus infection

- In week 23 and the first 4 days of week 24 (Jun 8 to 11, 2014), there were no new reports of oseltamivir (Tamiflu) resistant influenza A(H1N1)pdm09 virus infection. There are totally 47 reports of oseltamivir resistant influenza A(H1N1)pdm09 virus detected in Hong Kong since 2009.

Global Situation of Influenza Activity

- In the United States (week ending May 31, 2014), influenza activity remained low.
- In Canada (week ending May 31, 2014), influenza activity continued to decline.
- In the United Kingdom (week ending Jun 1, 2014), the weekly influenza consultations remained low in England, Wales, Scotland and Northern Ireland.
- In New Zealand (week ending Jun 1, 2014), the ILI consultation rate was below the seasonal threshold.
- In Singapore (week ending Jun 7, 2014), the number of consultations for acute respiratory infections remained low.
