

# FLU EXPRESS

*Flu Express* is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection. It monitors and summarizes the latest local and global influenza activities.

## Local Situation of Influenza Activity (as of Aug 7, 2013)

Reporting period: Jul 28 – Aug 3, 2013 (Week 31)

- The latest surveillance data showed that the local influenza activity increased.
- The Centre for Health Protection has collaborated with the Hospital Authority and private hospitals to monitor influenza associated intensive care unit (ICU) admissions or deaths (aged 18 years or above) since Jul 26, 2013. As of Aug 7, there were 5 cases of influenza associated ICU admission or death, in which 1 of them was fatal.
- Influenza can cause serious illnesses in high-risk individuals and even healthy persons. Except for those with contraindications, influenza vaccination is suitable for all members of the public.

### Influenza-like-illness surveillance among sentinel general outpatient clinics, 2011-13

In week 31, the average consultation rate for influenza-like illness (ILI) among sentinel general outpatient clinics (GOPCs) was 4.2 ILI cases per 1,000 consultations (Figure 1).

Figure 1 ILI consultation rate at sentinel GOPC, 2011-13

### Influenza-like illness surveillance among sentinel private doctors, 2011-13

In week 31, the average consultation rate for ILI among sentinel private doctors was 36.0 ILI cases per 1,000 consultations (Figure 2).

Figure 2 ILI consultation rate at sentinel GP, 2011-13

## Influenza virus detections (Laboratory surveillance), 2012-13

In week 31, the number of influenza viruses detected in the Public Health Laboratory Centre was 174, including 144 influenza A (H3) viruses, 29 influenza A (H1N1)2009 viruses and 1 influenza B virus (Figure 3).

Figure 3 Influenza virus detections, 2012-13

## Influenza-like illness outbreak monitoring, 2012-13

In week 31, 1 ILI outbreak occurring in an institution was recorded. In the first 4 days of week 32 (Aug 4 to 7, 2013), 3 ILI outbreaks occurring in schools/ institutions were recorded (Figure 4).

Figure 4 ILI outbreaks, 2012-13

## Rate of influenza-like illness syndrome group in accident and emergency departments, 2011-13<sup>#</sup>

In week 31, the rate of the influenza-like illness syndrome group in the accident and emergency departments (AED) was 144.0 (per 1,000 coded cases) (Figure 5).

<sup>#</sup>Note: The influenza-like illness syndrome group includes codes such as influenza, upper respiratory tract infection, fever, cough, throat pain, and pneumonia.

Figure 5 Rate of ILI syndrome group in AED, 2011-13

## Influenza associated hospital admission rates and deaths based on discharge coding, 2011-13

In week 31, hospital admission rates with principal diagnosis of influenza for persons aged 0-4 years, 5-64 years and 65 years or above were 0.42, 0.02 and 0.42 cases respectively (per 10,000 people in the age group) (Figure 6). Weekly number of deaths with any diagnosis of influenza in public hospitals is also shown in the figure on the right hand side.

Figure 6 Influenza associated hospital admission rates and deaths, 2011-13

## Fever surveillance at sentinel child care centres/ kindergartens, 2011-13

In week 30, 1.12% of children in the sentinel child care centres / kindergartens (CCC/ KG) had fever (Figure 7). The surveillance in week 31 was suspended due to summer holiday.

Figure 7 Percentage of children with fever at sentinel CCC/ KG, 2011-13

## Fever surveillance at sentinel residential care homes for the elderly, 2011-13

In week 31, 0.10% of residents in the sentinel residential care homes for the elderly (RCHEs) had fever (Figure 8).

Figure 8 Percentage of residents with fever at sentinel RCHE, 2011-13

## Influenza-like illness surveillance among sentinel Chinese medicine practitioners, 2011-13

In week 31, the average consultation rate for ILI among Chinese medicine practitioners (CMPs) was 2.24 ILI cases per 1,000 consultations (Figure 9).

Figure 9 ILI consultation rate at sentinel CMP, 2011-13

## Enhanced Surveillance for Severe Seasonal Influenza (Aged 18 years or above)

- From Jul 31, 2013, 12:00 noon to Aug 7, 2013, 12:00 noon, 2 cases of influenza associated ICU admission were recorded, in which none of them were fatal.

Note: The data reported are provisional figures and subject to further revision.

## **Surveillance of severe paediatric influenza-associated complication/death (Aged above one month and below 18 years)**

- In week 31 and the first 4 days of week 32 (Aug 4 to 7, 2013), there were no new reports of severe paediatric influenza-associated complication/death.

Note: The data reported are provisional figures and subject to further revision.

## **Surveillance of Tamiflu resistant influenza A(H1N1)2009 virus infection**

- In week 31 and the first 4 days of week 32 (Aug 4 to 7, 2013), there were no new reports of oseltamivir (Tamiflu) resistant influenza A(H1N1)2009 virus infection. There are totally 33 reports of Tamiflu resistant influenza A(H1N1)2009 virus detected in Hong Kong since 2009.

## **Global Situation of Influenza Activity**

- In the United States (week ending Jul 27, 2013), the influenza activity remained low.
- In Canada (week ending Jul 27, 2013), the influenza activity remained low.
- In the United Kingdom (week ending Jul 28, 2013), the ILI consultation rate remained low.
- In Europe (week ending Jul 28, 2013), the ILI consultation rate were at low levels in all countries in the Region.
- In New Zealand (week ending Aug 4, 2013), the ILI consultation rate was below the baseline.
- In Australia (week ending Jul 19, 2013), the ILI consultation rate continued to slowly increase, but it was lower than the usual rate for this time of year.
- In Singapore (week ending Aug 3, 2013), the number of consultations for acute respiratory infections was below the warning level.
