

FLU EXPRESS

Flu Express is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection. It monitors and summarizes the latest local and global influenza activities.

Local Situation of Influenza Activity (as of Jan 27, 2012)

Reporting period: Jan 15 – 21, 2012 (Week 3)

- The latest surveillance data showed that the overall influenza activity has continued to increase.
- The Centre for Health Protection has collaborated with the Hospital Authority and private hospitals to monitor influenza associated intensive care unit (ICU) admission and deaths (aged 18 years or above) since Jan 13, 2012. So far, there were 7 cases with influenza infection who required intensive care unit admission or died, in which 4 of them were fatal (as of Jan 26).
- The local influenza activity is expected to increase further during the next few weeks. Target groups are advised to receive influenza vaccinations as soon as possible to protect their health.

Influenza-like-illness surveillance among sentinel general outpatient clinics, 2010-12

In week 3, the average consultation rate for influenza-like illness (ILI) among sentinel general outpatient clinics (GOPCs) was 4.5 ILI cases per 1,000 consultations (Figure 1).

Figure 1 ILI consultation rate at sentinel GOPC, 2010-12

Influenza-like illness surveillance among sentinel private doctors, 2010-12

In week 3, the average consultation rate for ILI among sentinel private doctors was 31.3 ILI cases per 1,000 consultations (Figure 2).

Figure 2 ILI consultation rate at sentinel GP, 2010-12

Influenza virus detections (Laboratory surveillance), 2011-12

In week 3, the number of influenza viruses detected in the Public Health Laboratory Centre was 196, including 140 influenza B viruses, 52 influenza A (H3) viruses, 3 influenza A(H1N1)2009 viruses and 1 influenza A virus (Figure 3).

Figure 3 Influenza virus detections, 2011-12

Influenza-like illness outbreak monitoring, 2011-12

In week 3, 19 ILI outbreaks occurring in schools/institutions were recorded (Figure 4). In the first 5 days of week 4 (Jan 22 to 26, 2012), no ILI outbreaks occurring in schools/institutions were recorded.

Figure 4 ILI outbreaks, 2011-12

Influenza associated hospital admission rates and deaths based on discharge coding, 2009-12

In week 3, hospital admission rates with principal diagnosis of influenza for persons aged 0-4 years, 5-64 years and 65 years or above were 0.98, 0.07 and 0.14 case respectively (per 10,000 people in the age group)(Figure 5). Weekly number of deaths with any diagnosis of influenza in public hospitals is also shown on the right hand side.

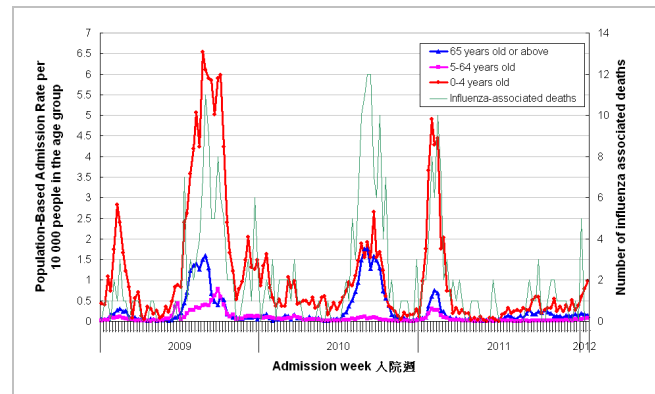

Figure 5 Influenza associated hospital admission rates and deaths, 2009-12

Fever surveillance at sentinel child care centres/ kindergartens, 2010-12

In week 3, 1.02% of children in the sentinel child care centres/ kindergartens had fever (Figure 6).

Figure 6 Percentage of children with fever at sentinel CCC/KG, 2010-12

Fever surveillance at sentinel residential care homes for the elderly, 2010-12

In week 3, 0.09% of residents in the sentinel residential care homes for the elderly had fever (Figure 7).

Figure 7 Percentage of residents with fever at sentinel RCHE, 2010-12

Influenza-like illness surveillance among sentinel Chinese medicine practitioners, 2010-12

In week 3, the average consultation rate for ILI among Chinese medicine practitioners was 1.73 ILI cases per 1,000 consultations (Figure 8).

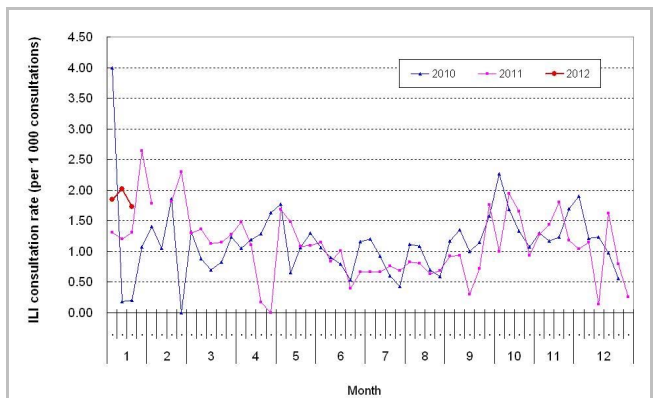

Figure 8 ILI consultation rate at sentinel CMP, 2010-12

Enhanced Surveillance for Severe Seasonal Influenza (Aged 18 years or above)

- From Jan 18, 2012, 12:00 noon to Jan 26, 2012, 12:00 noon, 5 cases with influenza infection who required intensive care unit admission or died were recorded, in which 3 of them were fatal.

Note: The data reported are provisional figures and subject to further revision.

Surveillance of severe paediatric influenza-associated complication/death (Aged above one month and below 18 years)

- In week 3, one case of severe paediatric influenza-associated complication involving a 13-year-old boy was reported. He had developed meningitis. He had been discharged. In the first 5 days of week 4 (Jan 22 to 26, 2012), one case of severe paediatric influenza-associated complication involving a 9-year-old boy was reported. He had developed myocarditis. He is now in stable condition. Both cases had their nasopharyngeal aspirate specimen tested positive for influenza B.

Note: The data reported are provisional figures and subject to further revision.

Surveillance of Tamiflu resistant influenza A(H1N1)2009 virus infection

- In week 3 and the first 5 days of week 4 (Jan 22 to 26, 2012), there were no new reports of oseltamivir (Tamiflu) resistant influenza A(H1N1)2009 virus infection. There are totally 16 reports of resistance to Tamiflu in strains of influenza A(H1N1)2009 virus detected in Hong Kong since 2009.

Global Situation of Influenza Activity

- In the United States (week ending Jan 14, 2012), influenza activity remained relatively low.
- In Canada (week ending Jan 14, 2012), influenza activity is increasing in more regions across the country, but the ILI consultation rate is within expected level for this time of year.
- In the United Kingdom (week ending Jan 15, 2012), influenza activity remained low in England, Wales, Scotland and Northern Ireland.
- In Europe (as of Jan 15, 2012), influenza activity has increased slowly but steadily over the past weeks, although remaining low compared to the same period of the 2010/2011 season.
- In Singapore (week ending Jan 21, 2012), the number of consultations for acute respiratory infections increased and was above the warning level.
